

Picture Wrangler: Save Time with Fast Image Relinking

Xinet® WebNative® Picture Wrangler® relinks multiple images in layout documents—quickly, simultaneously, effortlessly—with one click of a mouse.

Feature Overview

Relinking placed images to high-resolution files in complex page layouts can be a time-consuming task. Whether your user is a local designer who wants to relink assets before going to print, or a remote layout operator who is replacing retouched images in a document that has been moved to the server, Picture Wrangler simplifies the process and saves valuable time, with fast, easy relinking to high-resolution files.

Relink Images with a Single Click

When relinking images to high-resolution assets on the server, designers and production or layout operators who use WebNative Suite will appreciate this simple, highly efficient tool. Designed as a plug-in for Adobe InDesign and QuarkXPress, Picture Wrangler eliminates the tedious task of locating and relinking assets one by one. Users can select specific, individual assets, or relink all assets in a document as needed. This convenient tool locates the assets and relinks them all at once, making a dramatic difference in the speed at which operators can handle complex layouts.

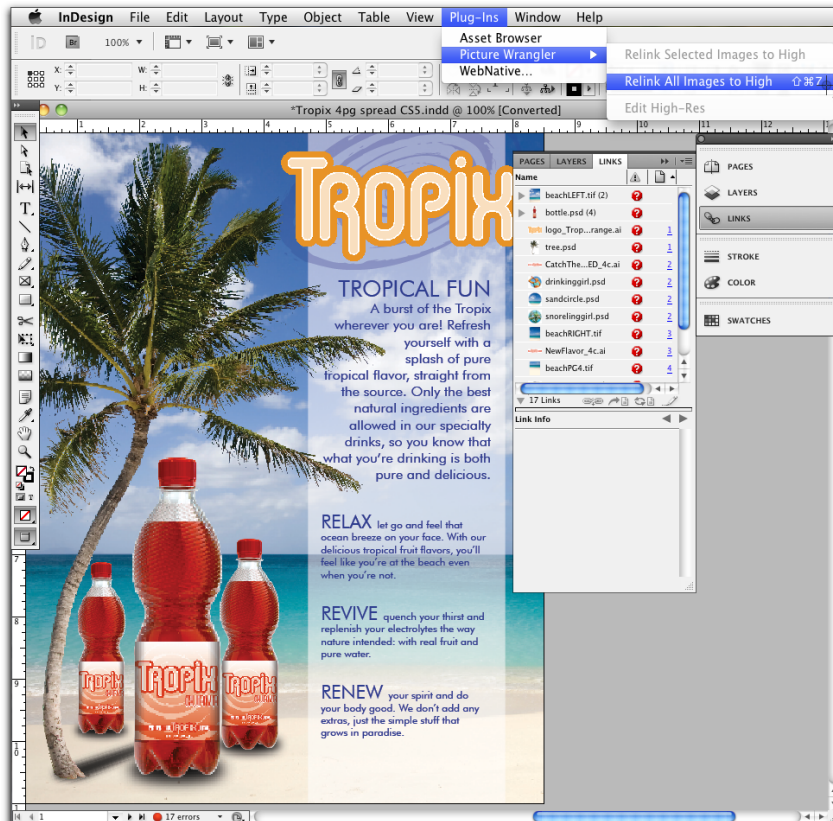

Feature

Relink multiple images to high-resolution versions on the server in local and remote workflows, without having to search through the file system for each individual asset.

Benefit

Save time in remote workflows with quick, one-click image relinking.
